

**Project Design Phase-II**  
**Solution Requirements (Functional & Non-functional)**

Date	25 June2025
Team ID	LTVIP2025TMID20775
Project Name	Visualization Tool for Electric Vehicle Charge and Range Analysis
Maximum Marks	4 Marks

**Functional Requirements:**

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Account Management	Registration through Form Registration through Gmail Registration through Credentials.
FR-2	Vehicle Input Module	Enter battery percentage Input vehicle type/model
FR-3	Range and Charge Analysis	Display estimated range based on input Visualize charge level and consumption trend Suggest optimal charging stations
FR-4	Interactive Map View	Show nearby charging stations Filter stations based on power availability Highlight reachable area on current charge
FR-5	Session History and Reporting	Show previous charge sessions Export usage and performance data
FR-6	Admin Dashboard	Manage station database View user analytics

**Non-functional Requirements:**

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	<b>Usability</b>	The interface must be intuitive for EV users, analysts, and admins, with smooth navigation across modules.
NFR-2	<b>Security</b>	Secure authentication and role-based access must be implemented to prevent unauthorized access.
NFR-3	<b>Reliability</b>	System must provide consistent performance and accurate range estimations during peak usage hours.
NFR-4	<b>Performance</b>	Real-time data updates and visualizations should render within 2 seconds of input for a smooth user experience.
NFR-5	<b>Availability</b>	The system should be operational 99.9% of the time, ensuring accessibility for daily EV planning.
NFR-6	<b>Scalability</b>	The tool should scale to accommodate more users, vehicles, and charging data without performance degradation.
